

Proof of Concept

	Averages (per computer per day)			Total Savings - all computers per year
	Baseline Period	Comparison Period	Savings (%)	
Cost (\$)	\$5.14	\$2.84	44.79 %	\$840,741.00
Energy (KWH)	0.73	0.40	44.56 %	118180
CO2 Emissions	11.4	6.3	44.79 %	1870957

In the graphs below the Red bars are the values for the period before power policies were applied (Baseline period), the Green bars are the values for the period after power policies were applied (Comparison period), and the Yellow bar is the day that the Power policies were applied and hence represents the transition between Baseline and Comparison periods.

Energy Usage (KWH per computer per day)

Cost (\$ per computer per day)

CO2 Emissions (per computer per day)
